REMARKS

Claims 1-84 were originally presented in the subject application. Claims 3, 11, 16, 31, 39, 44, 59, 67 and 72 were amended, and claims 85-112 added in an Amendment and Response to Office Action dated November 17, 2004. Claims 1, 29, 57 and 85 were amended in an Amendment and Response to Office Action dated April 28, 2005. Claims 1, 29, 57 and 85 were amended in an Amendment and Response to Office Action dated November 28, 2005. No claims have herein been amended, added or canceled. Therefore, claims 1-112 remain in this case.

The addition of new matter has been scrupulously avoided.

Applicants respectfully request entry of these remarks, and reconsideration and withdrawal of the grounds of rejection.

35 U.S.C. §102 Rejection

The Office Action rejected claims 1-7, 10, 11, 14-17, 22-27, 29-35, 38, 39, 42-45, 50-55, 57-63, 66, 67, 70-73, 78-83, 85-91, 94, 95, 98-101, and 106-111, under 35 U.S.C. §102(b), as allegedly anticipated by ERPNet, as Dialog File 20, accession No. 02821200. Applicants respectfully, but most strenuously, traverse this rejection.

With respect to an anticipation rejection, it is well settled that a claimed invention is not anticipated unless a single prior art reference discloses: (1) all the same elements of the claimed invention; (2) found in the same situation as the claimed invention; (3) united in the same way as the claimed invention; (4) in order to perform the identical function of the claimed invention.

ERPNet

Claim 1 recites, for example, causing a reply to the communication to be produced within the private electronic environment in real time.

Applicants could find no disclosure, teaching or suggestion in ERPNet of obtaining a reply within a private electronic environment in response to a user communication, much less

-4-

YOR920000555US1

doing so in real time. As an initial matter, Applicants point out that the example given for the system in ERPNet is the ordering of an automobile. No reply to the order per se is disclosed; rather, the progress of the order is tracked. Against the real time aspect of claim 1, the final Office Action cites to the first paragraph on page two of ERPNet (i.e., paragraph nine of the reference). However, the cited paragraph, in conjunction with prior paragraph, actually discusses the order flowing from the front end to the back end. There is no mention of a reply being produced.

Moreover, Applicants submit that one of ordinary skill in the art would understand what is meant by "real time" in the context of claim 1. As one example, appended hereto is a hard copy printout of a definition for "real time" from the well-known whatis.com information technology site:

Real time is a level of computer responsiveness that a user senses as sufficiently immediate or that enables the computer to keep up with some external process (for example, to present visualizations of the weather as it constantly changes). *Real time* is an adjective pertaining to computers or processes that operate in real time. Real time describes a human rather than a machine sense of time.

The above definition is also consistent with the description of a communication example given in the present application starting at page 8, line 6.

Claim 1 also recites, as another example, automatically returning the reply from the private electronic environment to the public electronic environment. Against this aspect of claim 1, the final Office Action cites to paragraph 8 of ERPNet. However, that paragraph discusses parts of the journey to the SAP R/3 (back end) system, and not any communication (let alone a reply) from the back end to the front end.

Therefore, Applicants submit that claim 1 cannot be anticipated by, or made obvious over, ERPNet.

Claims 29, 57 and 85 contain a limitation similar to that argued above with respect to claim 1. Thus, the arguments made above regarding claim 1 are equally applicable thereto. Therefore, claims 29, 57 and 85 also cannot be anticipated by, or made obvious over, ERPNet.

-5-

YOR920000555US1

Applicants submit that the dependent claims are allowable for the same reasons as the independent claims from which they directly or ultimately depend, as well as for their additional limitations.

For example, claim 3 recites messaging middleware causing the ERP application to produce the reply while the front end application and the messaging middleware wait therefore.

Against claim 3, the final Office Action cites to the disclosure of ERPNet regarding MQSeries and MSMQ. However, the mere mention of such applications does not disclose a reply from the ERP application, or messaging middleware causing the same, much less while the front end application and the messaging middleware wait.

Therefore, Applicants submit that claim 3 cannot be anticipated by, or made obvious over, ERPNet.

Claims 31, 59 and 87 contain a limitation similar to that argued above with respect to claim 3. Thus, the arguments made above regarding claim 3 are equally applicable thereto. Therefore, claims 31, 59 and 87 also cannot be anticipated by, or made obvious over, ERPNet.

As another example, claim 4 recites that the causing further comprises causing by the messaging middleware a command to be issued to the ERP application to trigger production of the reply.

Against claim 4, the final Office Action cites to the disclosure of ERPNet regarding MQSeries and MSMQ. However, the mere mention of such applications does not disclose a command issued from messaging middleware to an ERP application to trigger production of a reply.

Therefore, Applicants submit that claim 4 cannot be anticipated by, or made obvious over, ERPNet.

-6-

YOR920000555US1

Claims 32, 60 and 88 contain a limitation similar to that argued above with respect to claim 4. Thus, the arguments made above regarding claim 4 are equally applicable thereto. Therefore, claims 32, 60 and 88 also cannot be anticipated by, or made obvious over, ERPNet.

As another example, claim 10 recites details regarding forwarding the communication from the hosting server to the messaging middleware, specifying components of the messaging middleware.

Against claim 10, the final Office Action cites to paragraph 6 of ERPNet, disclosing a Java-enabled web browser, SAP R/3 and MQSeries or MSMQ. However, the mere mention of MQSeries and MSMQ does not alone disclose the claimed messaging middleware components or the particular flow of communication forwarding between the components.

Therefore, Applicants submit that claim 10 cannot be anticipated by, or made obvious over, ERPNet.

Claims 38, 66 and 94 contain a limitation similar to that argued above with respect to claim 10. Thus, the arguments made above regarding claim 10 are equally applicable thereto. Therefore, claims 38, 66 and 94 also cannot be anticipated by, or made obvious over, ERPNet.

As still another example, claim 11 recites generating, forwarding and returning a token identifier to/from particular messaging middleware components. Against claim 11, the final Office Action cites to paragraph 9 of ERPNet, mentioning tracking the automobile order. However, Applicants submit the cited section fails to disclose anything regarding the claimed token identifier or the particular path to/from the messaging middleware components.

Therefore, Applicants submit that claim 11 cannot be anticipated by, or made obvious over, ERPNet.

Claims 39, 67 and 95 contain a limitation similar to that argued above with respect to claim 11. Thus, the arguments made above regarding claim 11 are equally applicable thereto. Therefore, claims 39, 67 and 95 also cannot be anticipated by, or made obvious over, ERPNet.

-7-

YOR920000555US1

As yet another example, claim 14 recites forwarding the communication between particular messaging middleware components across a firewall. Against claim 14, the final Office Action cites to paragraph 14 of ERPNet. However, the cited section of ERPNet actually discloses a year 2000 firewall to block messages and send them back, the opposite of the claimed forwarding.

Therefore, Applicants submit that claim 14 cannot be anticipated by, or made obvious over, ERPNet.

Claims 42, 70 and 98 contain a limitation similar to that argued above with respect to claim 14. Thus, the arguments made above regarding claim 14 are equally applicable thereto. Therefore, claims 42, 70 and 98 also cannot be anticipated by, or made obvious over, ERPNet.

As another example, claim 15 recites, in part, a module within a particular component of the messaging middleware for issuing a command to the ERP application to trigger production of the reply. Against claim 15, the final Office Action cites to paragraph 6 of ERPNet, disclosing a Java-enabled web browser, SAP R/3 and MQSeries or MSMQ. However, the mere mention of MQSeries and MSMQ does not alone disclose the claimed module or triggering command.

Therefore, Applicants submit that claim 15 cannot be anticipated by, or made obvious over, ERPNet.

Claims 43, 71 and 99 contain a limitation similar to that argued above with respect to claim 15. Thus, the arguments made above regarding claim 15 are equally applicable thereto. Therefore, claims 43, 71 and 99 also cannot be anticipated by, or made obvious over, ERPNet.

As still another example, claim 23 recites details regarding the path of the communication to the ERP application, including forwarding to particular components of the messaging middleware. Against claim 23, the final Office Action cites to paragraph 6 of ERPNet, disclosing a Java-enabled web browser, SAP R/3 and MQSeries or MSMQ. However, the mere mention of MQSeries and MSMQ does not alone disclose the claimed messaging middleware components or the particular flow of communication forwarding that is claimed.

-8-

YOR920000555US1

Therefore, Applicants submit that claim 23 cannot be anticipated by, or made obvious over, ERPNet.

Claims 51, 79 and 107 contain a limitation similar to that argued above with respect to claim 23. Thus, the arguments made above regarding claim 23 are equally applicable thereto. Therefore, claims 51, 79 and 107 also cannot be anticipated by, or made obvious over, ERPNet.

Gralla

The final Office Action also rejected claims 1, 29, 57 and 85 under 35 U.S.C. §102(b), as allegedly anticipated by Gralla, "How the Internet Works." Applicants respectfully, but most strenuously, traverse this rejection.

Amended claim 1 recites, for example, automatically routing a communication from a user in the public electronic environment to the private electronic environment. Against this aspect of claim 1, the final Office Action cites to Gralla at page 263, step 4. However, Applicants submit that the transaction server is referred to in Gralla as "the site's," and the information is said to be sent "from the customer's computer to the ... transaction server ... over the internet ... [and] encrypted[.]" This results in a new inquiry from the transaction server to the credit card company, rather than routing the customer's communication. As shown on pages 262 and 263, the customer fills out an order form, then the transaction server sends a request to check the validity of the credit card. Thus, Applicants submit that the communication from the user to the transaction server (the order form) is not being routed to a private electronic environment.

In addition, contrary to the allegation in the final Office Action, Applicants submit one of ordinary skill would not view the transaction server as a user. Moreover, Applicants submit that the portion of the transaction server communicating with the bank is part of a private environment that includes the bank. Further, Applicants disagree that the order form is a request for a credit check. The order form is a request for goods or services, carrying with it express or implied permission to check the credit card number being used for payment.

-9-

YOR920000555US1

Amended claim 1 also recites, as another example, causing a reply to the communication to be produced within the private electronic environment in real time. Against this aspect of claim 1, the final Office Action cites to Gralla at page 263, step 5. However, Applicants submit what is actually sent from the transaction server to the credit card company is a new inquiry regarding the users credit card number that is generated by the transaction server. Thus, any reply from the credit card company is not a reply to the user communication, but a reply to the newly generated inquiry from the transaction server.

Finally, amended claim 1 also recites automatically returning the reply from the private electronic environment to the public electronic environment. Against this aspect of claim 1, the final Office Action cites to Gralla at page 263, step 6. However, Applicants submit there is no disclosure, teaching or suggestion that the reply from the credit card company goes anywhere but to the transaction server. Thus, even ignoring the fact that the reply is not a reply to the user communication, in any case it is never returned to the public electronic environment, as claimed.

Therefore, Applicants submit that claim 1 cannot be anticipated by, or made obvious over, Gralla.

Claims 29, 57 and 85 contain limitations similar to that argued above with respect to claim 1. Thus, the arguments made above regarding claim 1 are equally applicable thereto. Therefore, claims 29, 57 and 85 also cannot be anticipated by, or made obvious over, Gralla.

CONCLUSION

Applicants submit that the dependent claims not specifically argued herein are allowable for the same reasons as the independent claims from which they directly or ultimately depend, as well as for their additional limitations.

For all the above reasons, Applicants maintain that the claims of the subject application define patentable subject matter and earnestly allowance of claims 1-112.
